NOMBRE DE LA VARIABLE
Tizón por Alternaria (escala 0-9)
Porcentaje de daño de hormigas
Porcentaje de daño de áfidos
Porcentaje de gusano cogollero
Rayado bacteriano (escala 0-9)

Porcentaje de daño de pájaros
Enanismo amarillo de la cebada (escala 0-9)
Porcentaje de carbón cubierto
Espigas o mazorcas por metro cuadrado
Actividad alfa amilasa (segundos)
Porcentaje de fertilidad
Días a floración
Porcentaje de daño por heladas
Mancha foliar (*Fusarium nivale*)
Porcentaje de marchitez por Fusarium
Porcentaje de germinación

Porcentaje de daño por granizo
Helminthosporium (escala 0-9)
Mancha foliar (*Helminthosporium teres*)
Apariencia del grano
Tizón foliar (escala 0-9)
Roya de la hoja (escala de Cobb)
Roya de la hoja (cebada)
Porcentaje de acarne
Porcentaje de carbón volador
Número de días a la madurez
Porcentaje de humedad
Porcentaje de rotura del cuello

Mancha reticular (escala 0-9)
Densidad de plantas (tallos/metro cuadrado)
Altura (cm)
Peso de la planta (gramos)
Porcentaje de mildiu polvoriento
Porcentaje de proteína
Porcentaje de pudrición de maíz
Porcentaje de roña
Porcentaje de escaldadura
Índice de sedimentación (cc)

Tipo de semilla (L=grande, M=mediano, S=pequeño)
Septoria nodorum (escala 0-9)
Septoria spp. (escala 0-9)
Septoria tritici (escala 0-9)
Porcentaje de desgrane
Porcentaje de carbón semi-volador
Tizón de la hoja (escala 0-9)
Tizón de la hoja (escala 0-9)
Roya del tallo (escala de Cobb)
Porcentaje de roya lineal (espiga)
Roya lineal (hoja) (escala de Cobb)
Peso hectolítico (kg/hl)
Peso de 1000 granos (gramos)
Porcentaje de panza blanca
Rendimiento kg/ha

NOM DE LA VARIABLE
Alternaria (échelle 0-9)
Dégâts dus aux fourmis en pourcentage
Dégâts dus aux pucerons en pourcentage
Chenille soldat en pourcentage
Rayée bactérienne (échelle 0-9)

Dégâts dus aux oiseaux en pourcentage
Virose jaune de l'orge (échelle 0-9)
Charbon couvert en pourcentage
Epis par mètre²
Activité du α -amylase (en secondes)
Fertilité en pourcentage
Nombre de jours à la floraison
Dégâts par la gelée en pourcentage
Tache de la feuille (*Fusarium nivale*)
Fusarium en pourcentage
Germination en pourcentage

Dégâts dus à la grêle en pourcentage
Helminthosporium (échelle 0-9)
Tache de la feuille (*Helminthosporium teres*)
Apparence du grain
Sécheresse des feuilles (échelle 0-9)
Rouille brune (échelle de Cobb)
Rouille brune de l'orge
Versé en pourcentage
Charbon nu en pourcentage
Nombre de jours à la maturation
Humidité en pourcentage
Cassure du pédoncule en pourcentage

Helminthosporium de l'orge (échelle 0-9)
Population des plantes (tiges/mètre²)
Hauteur (cm)
Poids de la plante (grammes)
Oidium en pourcentage
Proteïne en pourcentage
Putréfaction du maïs en pourcentage
Fusarium de l'épi en pourcentage
Rhyncosporium en pourcentage
Indice de sedimentation (cc)

Type de grain (L=grand, M=moyen, S=petit)
Septoria nodorum (échelle 0-9)
Septoria spp. (échelle 0-9)
Septoria tritici (échelle 0-9)
Chute de grains en pourcentage
Charbon semi-nu en pourcentage
Tache de la feuille (échelle 0-9)
Tache de la feuille (échelle 0-9)
Rouille noire (échelle de Cobb)
Rouille jaune sur l'épi en pourcentage
Rouille jaune sur feuilles (échelle de Cobb)
Poids spécifique (kg/hl)
Poids de 1000 grains (grammes)
Mitadinage en pourcentage
Rendement kg/ha

RESULTS OF THE 11TH INTERNATIONAL TRITICALE SCREENING NURSERY

(ITSN) 1979-80

The 11th International Triticale Screening Nursery (ITSN) was sent in September, 1979 to be grown by cooperators in their spring season of 1980. One-hundred fifty-seven nurseries went to cooperators in 99 countries. The 328 advanced lines and checks in the nursery had been chosen from among CIMMYT's best materials. All had been grown and observed by CIMMYT scientists under a high yield environment with pressure from major diseases on the CIANO Experiment Station in the Yaqui Valley in northwest Mexico. Here, too, seed for this international nursery was multiplied, cleaned and treated with insecticide and organic fungicide before shipment.

Instructions on nursery management accompanied the mailing of seeds of each cooperator. Enough seed from each line was provided for a single row, unreplicated, of at least 2 m. in length. A field book was included with each nursery set, providing a standard format for recording data desired by CIMMYT. In receiving and processing the data returned by cooperators, CIMMYT assumes that the nursery was properly handled and that accurate results were reported. We cannot, however, attest to the rigor with which the trials were grown and results were obtained.

Sixty of the cooperators receiving the 11th ITSN returned field books with performance data at their locations in time to be included in this report. The choice of variables measured and the data returned rests with the individual cooperator. We have included in this summary all measures of all variables reported to us. The number of observations differs from variable to variable. The reader is urged to note the "NOBS" entry at the head of each variable column in the table that reports all data for all lines—that tells how many observations went into the data reported in that column, which may be an important indicator of the level of credibility that should be conferred. The reader should also bear in mind that the yield reported is from a single plot, essentially grown for observation rather than as a rigorous, replicated yield trial.

Presentation of Results

So that data in this report will be of optimal use to the reader, we present the results in three forms:

1. One *international summary*, listing the sites from which data were returned, with notations of all variables recorded and reported.
2. A table reporting the *mean of all observations* for each variable measured for each line in the nursery.
3. Selected tables reporting the *best performance by individual lines* on major variables, usually the top 5 to 10 percent. The table of contents lists all variables reported in this way.

Cooperators were asked to use agronomic and disease reporting methodology as described in CIMMYT's Information Bulletin 38. Data reported are simple means computed from those supplied by the cooperators. Data on rusts recorded by the modified Cobb scale were converted to average coefficient of infection (ACI) as explained in the yearly report of the United States Department of Agriculture International Spring Wheat Rust Nursery.

Feedback

Feedback of two kinds from cooperators is vital to the quality of this and other CIMMYT international nursery reports: First, the prompt return of carefully recorded data from each and every trial site; second, identification of errors that become part of our cooperator's station file. We ask for feedback of both kinds.
