Acknowledgements

In the first place, I would like to express my gratitude to all the wheat breeders and their collaborators who participated in the development of the varieties included in this publication. It is due to their dedicated efforts that the new varieties are undergoing continuous improvement in their genetic yield potential, as well as in their production stability under different agroclimatic conditions.

Many colleagues helped to complete parts of the list and make necessary corrections. I acknowledge their help and thank them for many useful suggestions and comments. I am especially thankful to the following collaborators in the Southern Cone Region for their time in revising the final list:

Argentina:	Ing. Héctor Conta	INTA
	Ing. Lizardo González	José Buck, S.A.
	Ing. Oscar Klein	Criadero Klein, S.A.
	Ing. Jorge Nisi	INTA
Brazil:	Ing. Juan Carlos Pavoni	Cargill Inc.
	Dr. Carlos Camargo	IAC
	Ing. Luis Alberto Campos	IAPAR
	Dr. Ady Raúl da Silva	Min. de Agricultura
	Ing. Ricardo Matzenbacher	FECOTRI- GO
Chile:	Ing. João Manoel Pompeu	IPAGRO
	Ing. Christian Hewstone	INIA
	Ing. Raúl Matte	SNA
	Ing. Mario Mellado	INIA
	Dr. Ignacio Ramírez	INIA
	Ing. Eric von Baer	Campex Baer

Paraguay: Ing. Rosa Ma. de Cristaldo IAN
 Ing. José Schvartzman IAN
Uruguay: Ing. Silvia Germán CIAAB
 Ing. Rubén P. Verges CIAAB

Special thanks go to Dr. Reynaldo Villareal, CIMMYT, Mexico, for going through the entire text and to all the staff of the CIMMYT

Communications Department, headed by Mr. Tiff Harris, for their help in editing and designing this bulletin.

Many hours of typing and computing by Mrs. Iris Cifuentes and Mrs. Carmen Gloria Moreau, CIMMYT secretaries in Santiago, Chile, are sincerely appreciated.

M. M. Kohli

Introduction

Wheat varieties from South America have been used in many breeding programs, including CIMMYT's Wheat Program. They have played a major role in widening the adaptation of new varieties and increasing their resistance to diseases and environmental stresses.

Seven years ago, when CIMMYT's Southern Cone Program was started, it was considered useful to compile a list of wheat varieties released by national programs in the region. The purpose of the list is to facilitate the exchange of more exact information among wheat researchers working with these materials and to assist them in their note-taking and record-keeping activities. However, due to other priorities, data collection did not begin until 1983. In the meantime, various published sources were consulted and varietal releases were updated.

During the compilation process, it was observed that some of the information from various sources did not coincide. As a result, several draft lists were made up and subsequently corrected by various cooperators. However, there are still many old varieties with incomplete information, though an effort has been made to provide complete information on widely used and/or new varieties.

In this bulletin, the final result of the compilation efforts, varietal crosses have been expressed using the new system of slashes and numbers recently adopted by CIMMYT.

If a variety has a name as well as a number, both have been indicated on the list to help those breeders who use one or the other. The table below contains a comparison of the old and new systems.

Order of Crosses	Symbol in Old System	Symbol in New System
1	—	/
2	X	//
3	/	/3/
4	()	/4/
5	[]	/5/
6	Key Bracket	/6/
n	Multiple Key Brackets	/n/
Backcross	Superscript	*

If parent A is crossed with parent B and the F₁ hybrid is crossed with parent C, its pedigree would be designated as A/B//C. Subsequent crosses with parental material D,E,F, and G would be indicated as:

Old system $\{[(A-B \times C/D)E]F\}G$

New system A/B//C/3/D/4/E/5/F/6/G

The female is designated by listing it first (to the left side) followed by the pollen parent (placed to the right side of the cross). Thus, A is the female and B is the pollen parent in the first cross. The line A/B is the female and C is the pollen parent in cross two, etc.

Backcrosses are designated with an asterisk (*) and a number indicating the dosage of the recurrent parent. The asterisk and the number are placed next to the crossing symbol that divides the recurrent and donor parents. The following are examples involving one backcross (two doses):

A is the recurrent parent: A*2/B

B is the recurrent parent: A/2*B

A/B is the recurrent parent: A/B*2//C/D

C/D is the recurrent parent: A/B//2*C/D

Each cross number begins with a letter designation of the cross origin, followed by a number. After the cross number, there is either a letter or number-letter combination. For top and double crosses, a letter is assigned to each plant selected in the F₁ generation. In number-letter combinations, the number identifies the individual plant and the letter indicates the location of selection. The zero-letter combinations (0Y, 0M, etc.) are reserved for populations carried as a bulk in that generation. The 500 series-letter combinations (500Y, 501M, etc.) indicate the selection of a single plant from a segregating population for inclusion in the crossing block. Examples of each are presented below.

Type of Cross	Cross Number	Plant Location			Selection and (by generation)		
		F ₁	F ₂	F ₃	F ₄	F ₅	F ₆
Simple (variety x variety)	CD31119	—	12Y	3M	1Y	0B	—
Top (F ₁ x variety) and Double (F ₁ x F ₁)	CD42029	A	10M	500Y	3M	2Y	0M

Since a large number of varieties are released annually in the Southern Cone Region, this bulletin requires updating and revision every two or three years to accomodate additional entries.

All information regarding new varieties (name, cross, pedigree, abbreviation), as well as additions and corrections to the present list are sincerely appreciated. Such information should be sent to:

The International Maize and Wheat Improvement Center (CIMMYT) is an internationally funded, nonprofit scientific research and training organization. Headquartered in Mexico, CIMMYT is engaged in a worldwide research program for maize, wheat, and triticale, with emphasis on food production in developing countries. CIMMYT is one of 13 nonprofit international agricultural research and training centers supported by the Consultative Group for International Agricultural Research (CGIAR). The CGIAR is sponsored by the Food and Agriculture Organization (FAO) of the United Nations, the International Bank for Reconstruction and Development (World Bank), and the United Nations Development Programme (UNDP). The CGIAR consists of 40 donor countries, international and regional organizations, and private foundations.

CIMMYT receives support through the CGIAR from a number of sources, including the international aid agencies of Australia, Austria, Brazil, Canada, China, Denmark, Federal Republic of Germany, France, India, Ireland, Italy, Japan, Mexico, the Netherlands, Norway, the Philippines, Saudi Arabia, Spain, Switzerland, United Kingdom and the USA, and from the European Economic Commission, Ford Foundation, Inter-American Development Bank, International Bank for Reconstruction and Development, International Development Research Centre, OPEC Fund for International Development, Rockefeller Foundation, and the United Nations Development Programme. Responsibility for this publication rests solely with CIMMYT.

Correct Citation: Wheat Varieties of the Southern Cone Region of South America. Names; Parentage; Pedigrees and Origins. Compiled by M.M. Kohli. 1986.
